All plastic and metal materials used in the manufacture of RocketPack Portable Drink Dispenser are approved by sanitary technical regulations for materials (EU-Regulation 1935/2004 and 2002/72/EG) destined to be in contact with food and drink!

Filling Instruction

Budget-Beverage-Backpack 15 liters

Before and after dispensing beverage, the golden rule is, make sure the 15-l budget beverage container (PE) and dispensing hose & gun is clean.

We can't stress this point enough. When the container is clean, then your product will always retain its original taste.

- 1) Remove the 15-l beverage container including dispensing hose & gun from the insulated backpack. Do not separate the connection between beverage container and dispensing hose. The tank can be filled remaining in backpack cover, but use in this case a large funnel (see illustration right below).
- 2) Take the very clean beverage container, remove the lid (grey cap) from the container and fill it with your non-carbonated / carbonated product. The black wing nut with plug-on cone insures the pressure balance in the container for operation trough Gravity-Fed.

- 3) The full filled beverage container with dispensing hose & gun enclosed can be now replaced in the backpack.
- 4) In case of serving a carbonated beverage from the backpack you must operate a plus pressure accessory for dispensing. Mechanical Hand Pump (Item N° RP1113/PP) is most suitable hereto. See above illustration hereto.

- 5) Take the cup dispenser which is attached to the side of backpack and fill it with matching cups.

Place behind the sign compartment of clear Vinyl the advertising image, e.g. poster, digital print or color copy (H 45 x L 65 cm).

- 6) You have also been supplied with a Gravity-Fed dispensing gun. Press the handle to start dispensing. Operation very simple and easy.

- 7) Now you can create the backpack and start with service.

Backpack Dispenser Harness Instruction

Step One

Clip together the waist harness. Make sure that all straps are straight and that the belt is comfortable.

Step Two

After clipping together the waist harness pull tight. This should be done when the backpack is first put on and then again after all other straps have been tightened.

Step Three

Clip together the chest belt. This is very important for overall comfort. It keeps the shoulder straps from pulling to the outside.

Step Four

After clipping together the chest belt, pull tight. This helps keep the two (2) shoulder straps pulled together, making more comfortable for the user.

Step Five

Tighten the shoulder straps. This will pull the backpack closer to the user. The tighter the backpack is to the user the more comfortable it is. Pull all straps as tight as possible. This also raises the backpack up on the users back making it more comfortable.

Step Six

Make sure that both shoulder straps are tight. This is very important because it pulls the backpack tight against your body.

Step Seven

Clip on the money pouch. Make sure that you tighten both sides.

Cleaning and Sanitation Non-Carbonated Beverage Backpack "Gravity-Fed"

Important: The stainless-steel beverage tank, dispensing hose gun, valves and hoses must be cleaned and sanitized at the end of each day's use. The beverage tank is capable of withstanding repeated cleaning without resulting in off-taste or material degradation.

We recommend that you use a multipurpose cleaning product especially made for cleaning stainless steel food service equipment that has a wide variety of use in breweries, beverage plants and all food processing operations.

1. Remove the beverage container from the insulated backpack together with dispensing hose & gun.
2. Don't remove the dispensing hose from the container.
3. Un-lock latch and remove lid.
4. Rinse out the tank.
5. Pour 1 ½ gallons (approx. 5 litres) of warm tap water into the tank. (Do not use well water and never use a public bathroom).
6. Do a quick rinse of the container and dispensing hose & gun.
7. With water still in the container add the multi cleaning product. Replace lid and shake the beverage tank for 10 seconds.
8. Allow the solution to remain in the tank for three additional minutes.
9. Open the gray release valve on the lid to get pressure equalization in the container.
10. Dispense the liquid inside the tank giving you a good sanitation process. Make sure you empty the whole tank through the dispensing hose & gun.
11. Rinse beverage tank with warm tap water twice. Shake vigorously. Fill up for a third time. Repeat steps 8 – 10.
12. Cleaning and sanitation is complete. Allow the beverage tank to dry before replacing lid, if possible. Replace lid and store for next use.

Notes/Tips: If you use the beverage tanks for two or three days in a row, you may fill the tanks with the beverage products (e. g. soft drinks, beer, juice ...) and put them in a refrigerator for overnight storage instead of cleaning them every day. Be sure the latch is secure properly to prevent loss of pressure and carbonation, leading to a "flat drink". We recommend cleaning a minimum of every 2 – 3 days.

Warranty

Full Two Year Warranty On All Components

For two Years from date of purchase, Rocket Packs Backpack-Beverage-Systems will repair or replace any component, free of charge, if defective in material or workmanship.

Repairs necessitated by normal wear, accident, improper care or negligence, are not covered under this guarantee, and products returned under these conditions will be repaired or replaced for a reasonable charge.

Warranty registration is not necessary to receive the privileges of the Warranty.
